CENTRIFUGAL PUMPS WITH OPEN IMPELLER EQUIPPED WITH IE2, IE3 MOTORS  
COMPLYING WITH REGULATION (EU) 2019/1781

# COF Series

CENTRIFUGAL PUMPS BARE SHAFT

**ErP 2009/125/EC**

## Directive 2009/125/EC of the European Union

The **Directive 2005/32/EC** on energy-using products (**EuP**) and the subsequent **Directive 2009/125/EC** on energy-related products (**ErP**) established the ecodesign requirements for products to reduce their energy consumption and consequently their environmental impact.

These requirements apply to products placed and used in the European Economic Area (European Union plus Iceland, Liechtenstein and Norway) as a stand-alone unit or as integrated parts in other products.

The following tables show the Regulations that define the requirements for Lowara products.

- Some types of **pump**, used for pumping clean water:

Regulations	From	Target
(EU) N. 547/2012	1 January 2015	<b>MEI</b> $\geq 0,4$

- Circulators** with a rated hydraulic output power of between 1 and 2500 W, designed for use in heating systems or in secondary circuits of cooling distribution systems:

Regulations	From	Target
(EC) N. 641/2009, (EU) N. 622/2012 and (EU) 2019/1781	1 August 2015	<b>EEI</b> $< 0,23$

- Three-phase motors** with frequency 50 or 60 or 50/60 Hz and voltages between 50 and 1000 V (S1 and D.O.L.):

Regulations	From	Target
(EU) 2019/1781 and 2021/341	1 July 2023	<b>IE2</b> : motors with a rated output $\geq 0,12$ and $\leq 0,749$ kW <b>IE3</b> : motors with a rated output $\geq 0,75$ and $\leq 74,9$ kW <b>IE4</b> : motors with a rated output $\geq 75$ and $\leq 200$ kW <b>IE3</b> : motors with a rated output $\geq 201$ and $\leq 1000$ kW

- Single-phase motors** with frequency 50 or 60 or 50/60 Hz and voltages between 50 and 1000 V (S1 and D.O.L.):

Regulations	From	Target
(EU) 2019/1781 and 2021/341	1 July 2023	<b>IE2</b> : motors with a rated output $\geq 0,12$ kW

- Variable speed drives** with three-phase input and rated output power from 0,12 kW up to 1000 kW, rated for operating with motor included in the same regulations:

Regulations	From	Target
(EU) 2019/1781 and 2021/341	1 July 2021	<b>IE2</b>

## CO - COF SERIES HYDRAULIC PERFORMANCE RANGE AT 50 Hz

## SHO SERIES HYDRAULIC PERFORMANCE RANGE AT 50 Hz

## CO - SHO SERIES TYPICAL APPLICATION

### Water Purification:

De-ionized water  
Water treatment  
Filtration  
Commercial pools

### Food and Drink:

Food processing  
Bottle washing  
Citrus processing  
Dish washing  
Brewing  
Sanitary ware

### Medical:

Laser cooling  
Medical chillers  
Sanitary equipment

### Heating, Ventilating & Air Conditioning (HVAC)

Air scrubbers  
Water re-circulation  
Cooling towers  
Cooling systems  
Temperature control  
Chillers  
Induction heating  
Heat exchangers  
Water heating

### Graphics:

Film washing  
Cooling

### Waste Management:

Waste treatment

### Plastics:

Extrusion machines  
Temperature control  
Manufacture of polymers

### Machine Tool:

Degreasing  
Parts washing  
Chemical treatment  
Heat treatment

### Laundry:

Industrial and Commercial  
washing

### General Industry:

Spray Booths  
Light chemical transfer  
Booster systems  
Firefighting systems

## CO SERIES

### Open impeller centrifugal electric pumps and threaded connections

#### MARKET SECTORS

CIVIL, INDUSTRIAL.

#### APPLICATIONS

- Washing of metal parts and/or surface treatment.
- Washing of produce in the packaging industry.
- Food industry washing equipment and systems.
- Dyeing plant and textile industry.
- Plants for the circulation and transfer of moderately viscous liquids, with light chemical aggressiveness.
- Industrial washing machines and commercial dishwashers.

#### CONSTRUCTION FEATURES

- Close-coupled, single-impeller centrifugal pump with axial suction and radial delivery.
- Threaded suction and delivery ports (Rp ISO 7).
- Compact construction; adapter for motor/pump coupling; the impeller is keyed directly to the motor shaft extension.
- Back pull-out design; no need to disconnect the pump body from the system pipes.
- **All components in contact with pumped liquid are made of AISI 316L stainless steel**
- **AISI 316L** stainless steel open **impeller** with four pressed vanes welded onto base disk.
- Impeller's front **wear surface** consists of a study **AISI 316L** stainless steel plate welded onto the suction port.
- **AISI 316L** stainless steel **pump body and seal housing disk**, with no diffusers or cavities for easier cleaning and maintenance.
- Pump body tightened by 8 screws allowing rotation of the discharge head.

#### • Mechanical seal:

**Standard version:** Carbon/ Ceramic faces, FPM elastomers. The other parts are made of AISI 316L stainless steel. **"K" version:** faces are made of Silicon Carbide and Tungsten Carbide. FPM Elastomers. The other parts are made of AISI 316L stainless steel.

#### • FPM O-Rings.

#### OPTIONAL

#### FEATURES

- Different voltages and frequencies.
- Different materials for the mechanical seal and O-rings.

#### SPECIFICATIONS

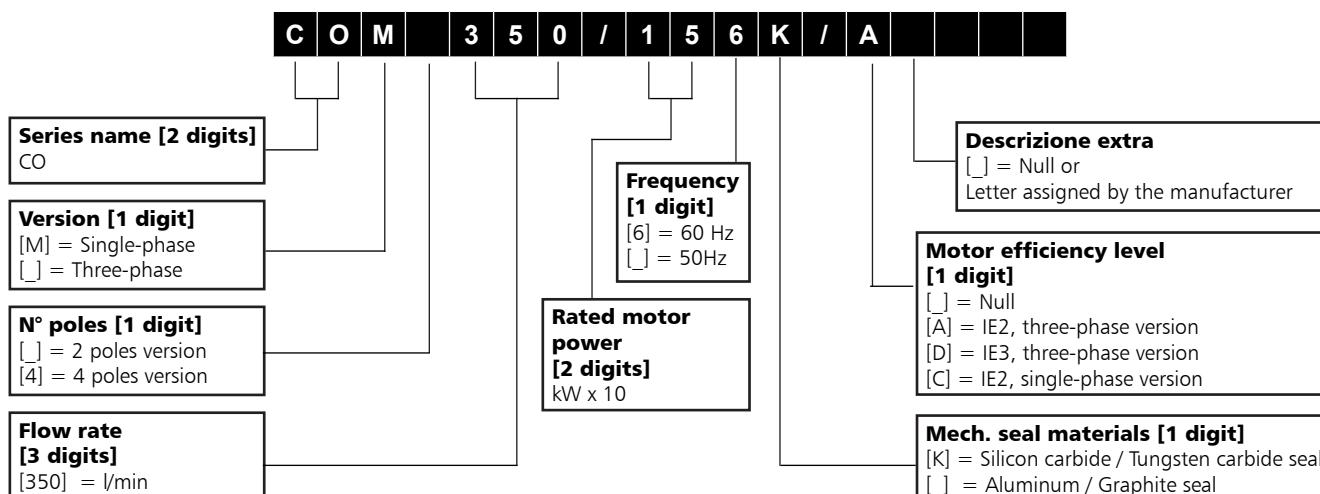

##### PUMP

- Delivery up to **54 m<sup>3</sup>/h**.
- Head up to **24 m**.
- Maximum ambient temperature: **45 °C**.
- Temperature of pumped liquid:  
-10°C to +110°C for standard version.
- Maximum working pressure: **8 bar** (PN 8).
- Suspended solids handled up to:  
CO350: **11 mm**. CO500: **20 mm**.
- Hydraulic performance compliant with ISO 9906:2012 (Grade 3B). (ex ISO 9906:1999 - Annex A).

##### MOTOR

- Asynchronous, squirrel cage rotor, close construction, external ventilation.
- Protection class: **IP55**.
- **Class 155 (F) Insulation**
- Performance to EN 60034-1 specifications.
- **Standard voltage:**
  - Single-phase version: 220-240 V, 50 Hz
  - Three-phase version: 220-240/380-415 V, 50 Hz.
- Condensate drain plugs in the standard version.

## CO SERIES IDENTIFICATION CODE

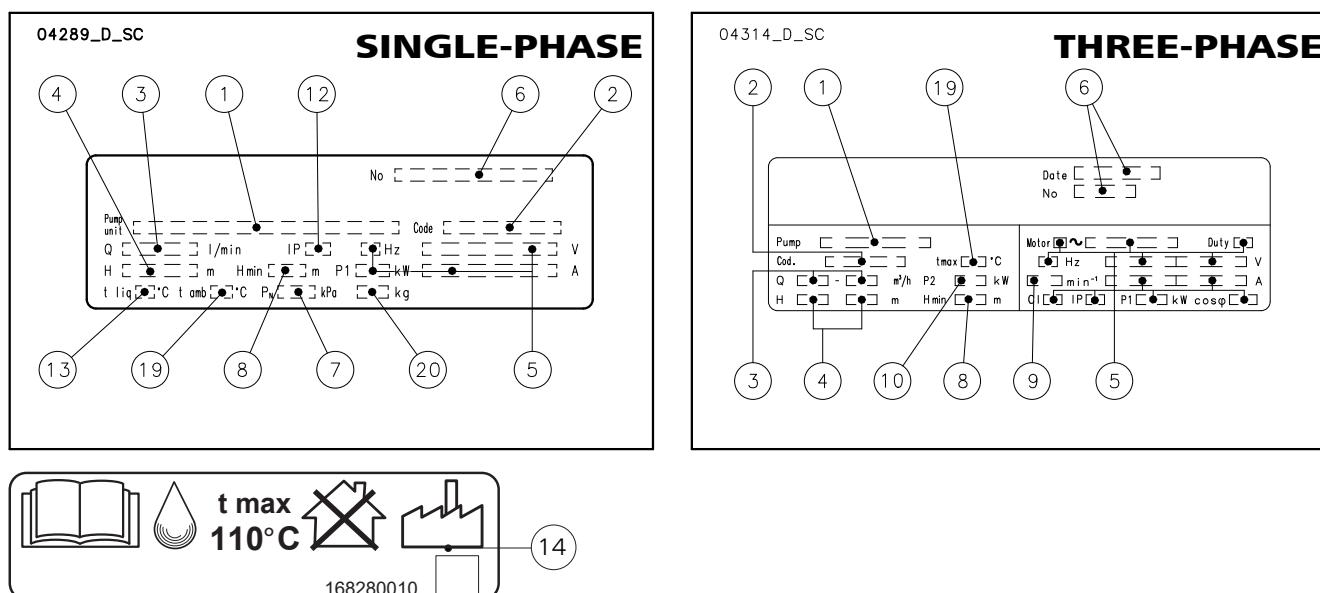

EXAMPLE :

COM 350/156K

CO series electric pump, single-phase, flow rate 350 l/min, rated power 1,5 kW, 60 Hz version, Silicon Carbide / Tungsten Carbide seal.

## RATING PLATE

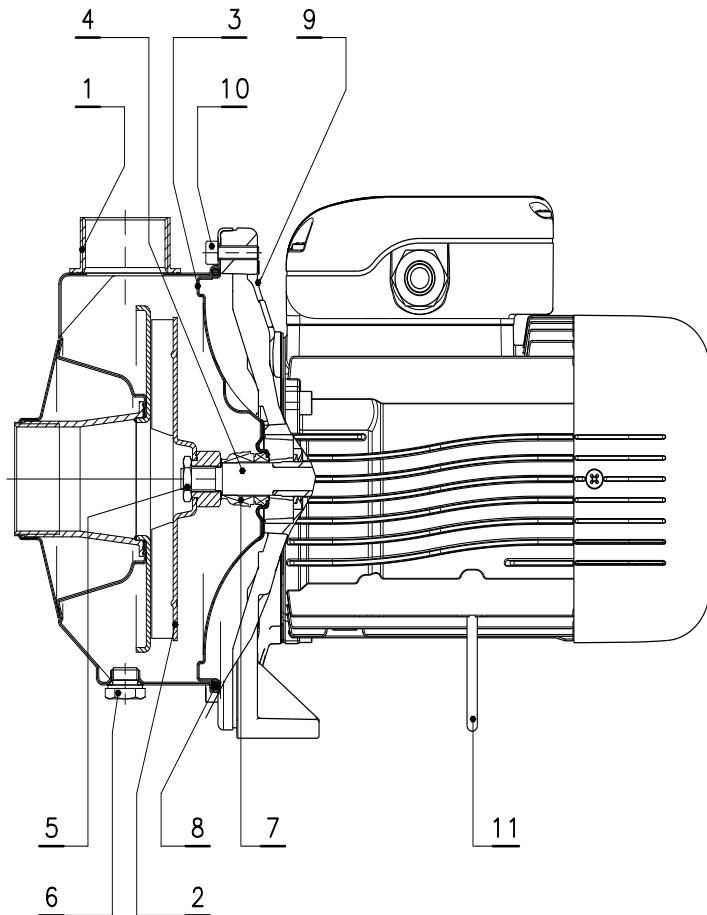

## LEGEND

- 1 - Electric pump unit type
- 2 - Electric pump unit code
- 3 - Flow range
- 4 - Head range
- 5 - Electrical data
- 6 - Serial number (data + order number)
- 7 - Maximum operating pressure
- 8 - Minimum head (EN 60335-2-41)
- 9 - Speed
- 10 - Nominal rated power
- 13 - Maximum operating liquid temperature (uses as EN 60335-2-41)
- 14 - Maximum operating liquid temperature (for use other than EN 60335-2-41)
- 19 - Maximum operating ambient temperature
- 20 - Weight

### MOTORS (ErP 2009/125/EC)

- Short-circuit squirrel-cage motor, enclosed construction with external ventilation (TEFC).
- **IP55** protection degree.
- Insulation class **155 (F)**.
- Electrical performances according to EN 60034-1.
- Supplied **single-phase** surface motors with **IE2** efficiency level
- Supplied **three-phase** surface motors with **IE2** efficiency level (power < 0,75 kW) or **IE3** efficiency level (power ≥ 0,75 kW) as standard according to EN 60034-30:2009 and EN 60034-30-1:2014.
- Metric cable gland according to EN 50262.

- **Single-phase** version:  
0,40 to 1,5 kW (2-pole)  
220-240 V 50 Hz  
Built-in automatic reset overload protection  
Maximum ambient temperature: 45 °C.
- **Three-phase** version:  
0,40 to 3 kW (2-pole)  
220-240/380-415 V 50 Hz  
Overload protection to be provided by the user.  
Maximum ambient temperature: 40 °C.

From 1 July 2023 in accordance with the **Regulations (EU) 2019/1781 and 2021/341**, the three-phase 50 Hz, 60 Hz or 50/60 Hz **surface motors** with **power outputs ranging from 0,12 to 0,749 kW** must have a minimum level **IE2** efficiency; the ones with power outputs ranging **from 0,75 and 74,9 kW** must have a minimum level of **IE3** efficiency. The single-phase **surface motors** with **power outputs ranging from 0,12 kW** must have a minimum level **IE2** efficiency.

The following tables also contain the mandatory information pursuant to Annex I, section 2, of the aforementioned Regulations.

## COF SERIES

### Bare shaft centrifugal pumps with open impeller

#### MARKET SECTORS

CIVIL, AGRICULTURAL, INDUSTRIAL.

#### APPLICATIONS

- Pumping of moderately viscous water and liquids with moderate chemical aggressiveness.
  - Water supply.
  - Irrigation.
  - Water circulation (cold, hot, refrigerated).
  - Washing in the packaging, textile and food industries.
- \* For aggressive liquids, please contact our sales network.

#### CONSTRUCTION FEATURES

- Close-coupled, single-impeller centrifugal pump featuring axial intake and radial discharge.
- Pump coupled by adapter to the bare shaft support; special shaft extension in common with pump are supported by ball bearing.
- Back pull-out design; no need to disconnect the pump body from the system pipes.
- Threaded suction and delivery ports (Rp ISO 7).
- **In the standard version, all parts in contact with pumped liquid are made of AISI 316 stainless steel.**
- High performance open **impeller** made of **AISI 316** stainless steel.
- **Sturdy support with permanently lubricated bearings.**
- **Flexible couplings available for connection to motor shaft of various sizes.**

#### Suspended solids:

**11 mm (COF350), 20 mm (COF500)**

- **Mechanical seal** with **Ceramic/Carbon** faces (**Silicon Carbide** and **Tungsten Carbide** in the "K" version), **FPM** elastomers, other parts are made of **AISI 316** stainless steel.

#### FPM O-rings.

#### OPTIONAL FEATURES

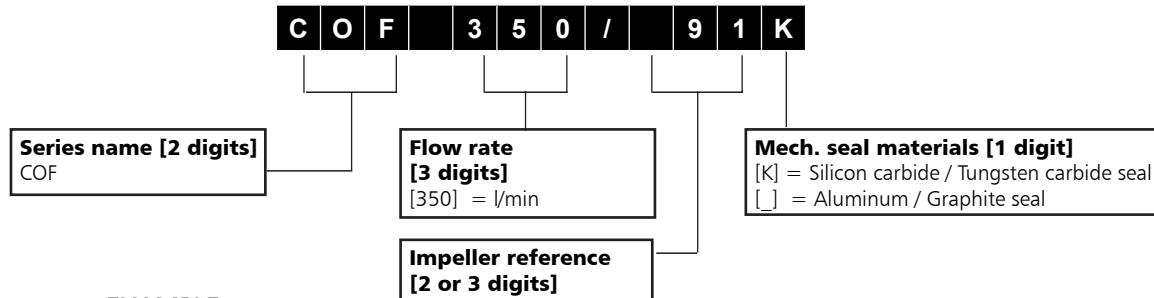

- Different materials for the mechanical seal and O-rings.
- Electric pump unit (pump, motor, coupling, base).

#### SPECIFICATIONS

##### PUMP

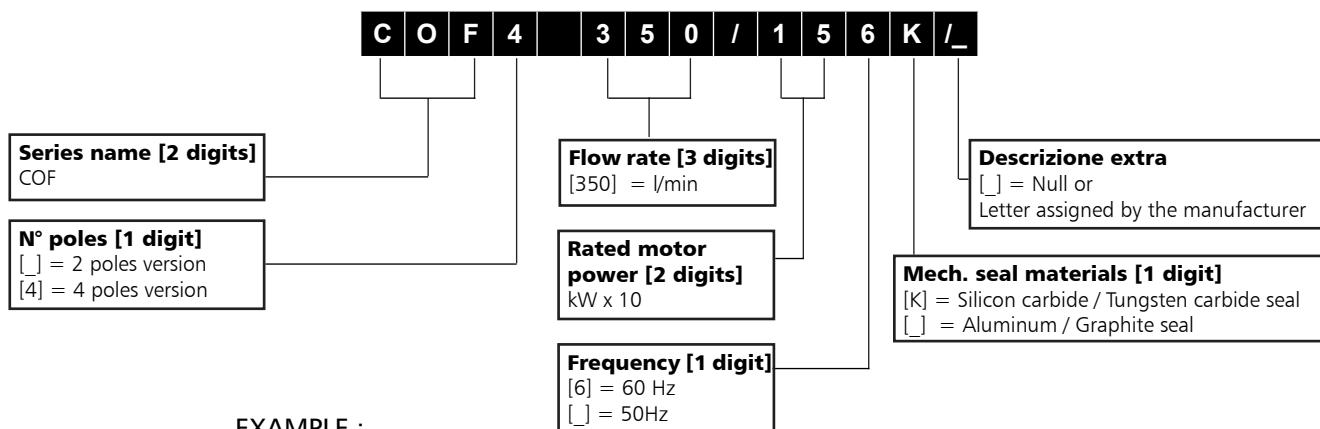

- Delivery up to **54 m<sup>3</sup>/h.** (at 2900 rpm)
- Head up to **24 m.** (at 2900 rpm)
- Maximum ambient temperature: **45 °C.**
- Temperature of pumped liquid:  
-10°C to +110°C for standard version.
- Maximum working pressure: **8 bar** (PN 8).
- Hydraulic performance compliant with ISO 9906:2012 (Grade 3B). (ex ISO 9906:1999 - Annex A).
- Counterclockwise rotation facing the pump from the suction port.
- **Standard supplied IE2/IE3 motors are compliant with Regulation (EC) no. 640/2009 and IEC 60034-30.**

## COF SERIES IDENTIFICATION CODE PUMP

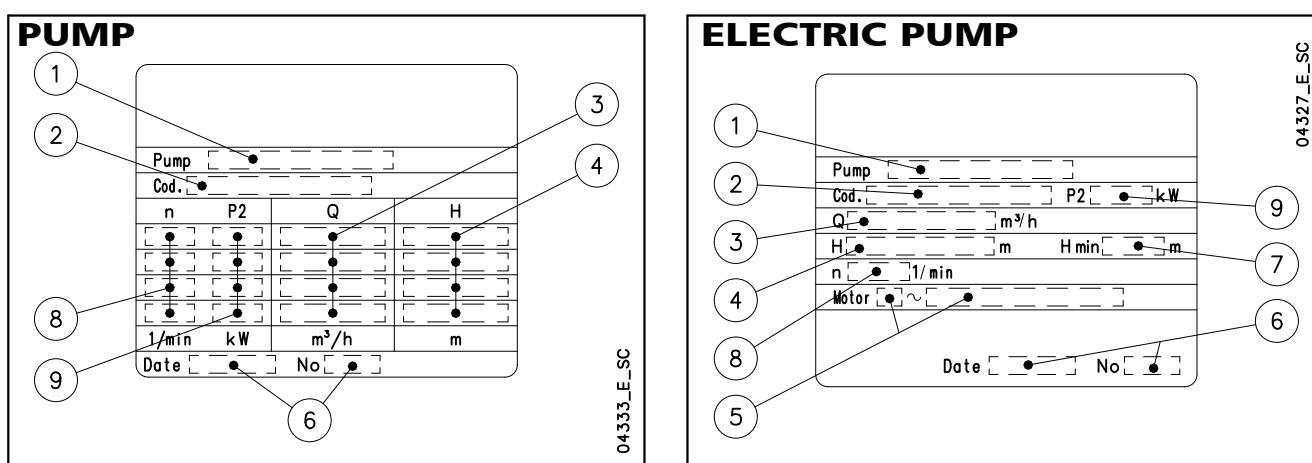

EXAMPLE :  
COF 350/91K  
COF pump series, flow rate 350 l/min,  
impeller reference 91, Silicon Carbide / Tungsten Carbide seal.

## ELECTRIC PUMP

EXAMPLE :  
COF 350/15K  
COF electric pump series, flow rate 350 l/min, 1,5 kW rated  
motor power, 50 Hz version, Silicon Carbide / Tungsten Carbide seal.

## COF SERIES MOTORS (ErP 2009/125/EC)

- Short-circuit squirrel-cage motor, enclosed construction with external ventilation (TEFC).
- IP55** protection degree.
- Insulation class **155 (F)**.
- Electrical performances according to EN 60034-1.
- Supplied **three-phase** surface motors with **IE2** efficiency level (power < 0,75 kW) or **IE3** efficiency level (power ≥ 0,75 kW) as standard according to EN 60034-30:2009 and EN 60034-30-1:2014.

- Metric cable gland according to EN 50262.

- Three-phase** version:  
220-240/380-415 V 50 Hz  
Overload protection to be provided by the user.  
Maximum ambient temperature: 50 °C.

From 1 July 2023 in accordance with the **Regulations (EU) 2019/1781 and (EU) 2021/341**, the three-phase 50 Hz, 60 Hz or 50/60 Hz **surface motors** with **power outputs ranging from 0,12 to 0,749 kW** must have a minimum level **IE2** efficiency; the ones with power outputs ranging **from 0,75 to 74,9 kW** must have a minimum level of **IE3** efficiency. The single-phase **surface motors** with **power outputs ranging from 0,12 kW** must have a minimum level **IE2** efficiency.

The following tables also contain the mandatory information pursuant to Annex I, section 2, of the aforementioned Regulations.

## SHO Series

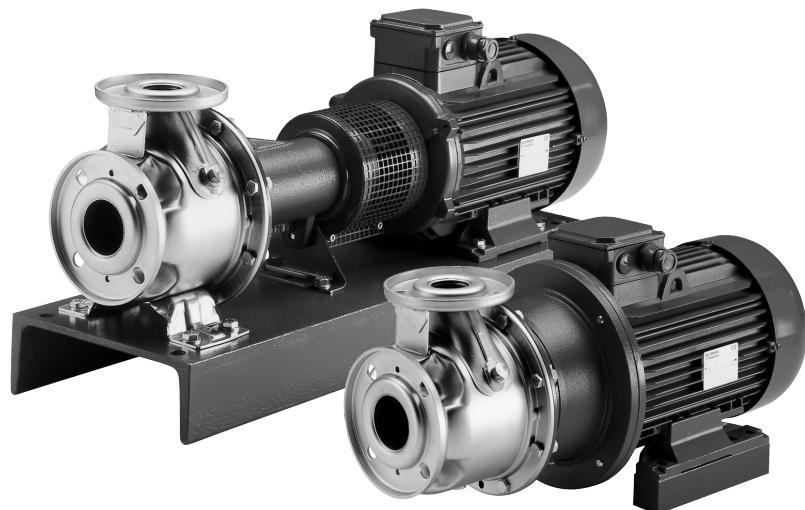

### Centrifugal pumps with open impeller and flanged connections

#### MARKET SECTORS

CIVIL, INDUSTRIAL.

#### APPLICATIONS

- Industrial washing machines.
- Commercial dishwashers.
- Washing of metal parts, surface treatment.
- Food industry washing equipment and systems.
- Dyeing plants and textile industry.
- Plants for the circulation and transfer of moderately viscous liquids, with light chemical aggressiveness.

#### CONSTRUCTION FEATURES

- The SHO series consists of single stage centrifugal pumps made of pressed AISI 316 stainless steel with **open and recessed impeller made of AISI CF8M stainless steel (casted AISI 316)**.
- Stainless steel centrifugal pump with end suction and radial discharge ports.
- Pump body made of AISI 316L stainless steel.
- AISI 316L stainless steel fill & drain plugs.
- Available sizes: DN25 to DN50.
- Mechanical seal according to EN 12756 (ex DIN 24960).
- **SHOD** execution with **double mechanical seal**.
- Flanges in compliance with EN 1092-1 (ex UNI 2236) and DIN 2532.

#### SPECIFICATIONS

##### PUMP

- Delivery up to **56 m<sup>3</sup>/h** (2 poles) / up to **54 m<sup>3</sup>/h** (4 poles).
- Head up to **50 m** (2 poles) / up to **12 m** (4 poles).
- Temperature of pumped liquid:  
-10°C to +120°C for standard version.
- Maximum working pressure: **12 bar** (PN 12).
- Hydraulic performance compliant with ISO 9906:2012 (Grade 3B). (ex ISO 9906:1999 - Annex A).

##### MOTOR

- Asynchronous, squirrel cage rotor, close construction, external ventilation.
- Protection class: **IP55**.
- **Class 155 (F)** Insulation
- Performance to EN 60034-1 specifications.
- **Standard voltage:**  
220-240/380-415 V, 50 Hz, for powers up to 3 kW;  
380-415/660-690 V, 50 Hz, for powers above 3 kW.

## **SHO SERIES**

### **MOTOR-PUMP COUPLING**

- **SHOE**: close-coupled by means of a bracket with impeller keyed directly to the motor shaft extension.
- **SHOS**: with a bracket, adapter and rigid coupling keyed to the standard motor shaft extension.
- **SHOD**: execution with double mechanical seal. Bracket, adapter and rigid coupling keyed to the standard motor shaft extension.

### **ACCESSORIES ON REQUEST**

- AISI 316 stainless steel or galvanized iron counter-flanges.
- Intermediate flange with pressure gauge connection.
- Pump and motor shims.

### **SUSPENDED SOLIDS**

The SHO pumps are not drainage pumps, so can not be used for applications like waste water disposal or black waters. The SHO series can be used in washing systems or for clean water with small solid particles included.

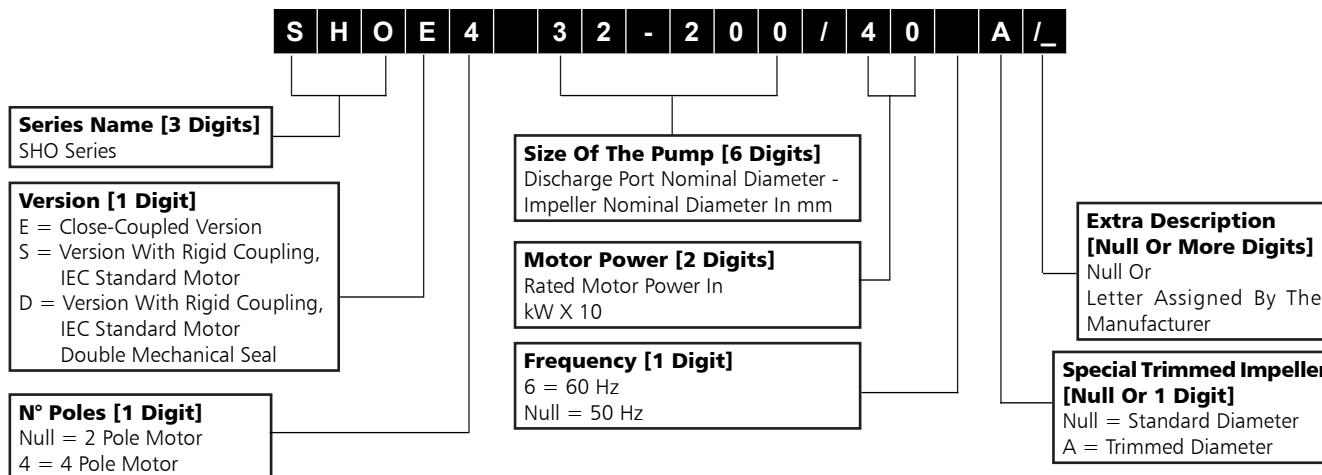

The recessed position of the impeller allows the pumping of liquids with small solid particles reducing the risk of clogging the pump. The dimensions of the solids are indicated in the table.

- **Suspended solids** handled up to:

TYPE	SIZE	Ø SOLIDS (mm)
SHOE	25-32 / 200	20
SHOS	25-32 / 125 - 160	22
SHOD	40 / 125 - 160	30
	50 / 125 - 160	40

## SHO SERIES IDENTIFICATION CODE

### EXAMPLES :

SHOE 25-160/30/D

SHO series electric pump, close-coupled version, 2 poles, DN 25 nominal discharge port, 200 mm nominal impeller diameter, rated power 3 kW, 50 Hz version.

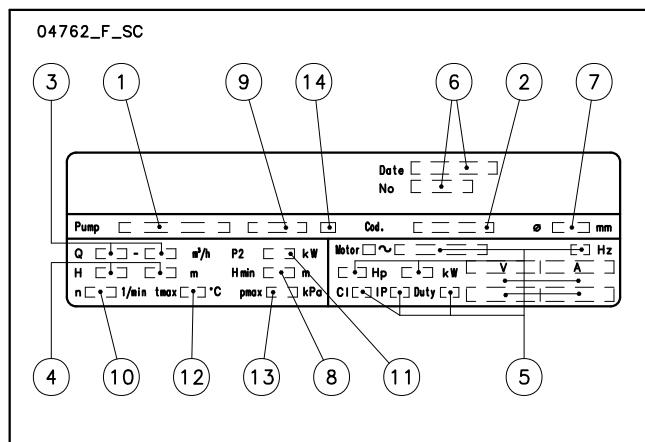

SHOS 50-160/110/A/D

SHO series electric pump with rigid coupling, 2 poles, DN 50 nominal discharge port, 160 mm nominal impeller diameter, rated power 11 kW, 50 Hz version, trimmed impeller.

SHOD4 32-160/05

SHO series electric pump with rigid coupling and double mech. seal, 4 poles, DN 32 nominal discharge port, 160 mm nominal impeller diameter, rated power 0,55 kW, 50 Hz version.

## SHO SERIES

### MECHANICAL SEAL, ACCORDING TO EN 12756

Mechanical seal with mounting dimensions according to EN12756 (ex DIN 24960) and ISO 3069.

(\*) Flushing of the seals has to be done with clean liquid and external flushing circuit. The liquid has to be compatible with the pumped liquid and with a pressure 0,5 bar higher than the pressure in the pump. (Rp 1/4 connections).

## LIST OF MATERIALS

POSITION 1 - 2	POSITION 3	POSITION 4 - 5
B : Resin impregnated carbon	E : EPDM	G : AISI 316
Q <sub>1</sub> : Silicon carbide	V : FKM (FPM)	
C : Special resin impregnated carbon	T : PTFE	
V : Ceramic		

Fluoro-elastomer: FPM (old ISO), FKM (ASTM & new ISO).

## COMPLETE PUMP PRESSURE / TEMPERATURE OPERATING LIMITS

a xylem brand

## SHOE SERIES MOTORS (ErP 2009/125/EC)

- Short-circuit squirrel-cage motor, enclosed construction with external ventilation (TEFC).
- IP55** protection degree.
- Insulation class **155 (F)**.
- Electrical performances according to EN 60034-1.
- Supplied **three-phase** surface motors with **IE2** efficiency level (power < 0,75 kW) or **IE3** efficiency level (power ≥ 0,75 kW) as standard according to EN 60034-30:2009 and EN 60034-30-1:2014.

- Metric cable gland according to EN 50262.
- Three-phase** version:
  - 220-240/380-415 V, 50 Hz, power up to 3 kW;
  - 380-415/660-690 V, 50 Hz, power above 3 kW.
 Overload protection to be provided by the user.

From 1 July 2023 in accordance with the **Regulations (EU) 2019/1781 and (EU) 2021/341**, the three-phase 50 Hz, 60 Hz or 50/60 Hz **surface motors** with **power outputs ranging from 0,12 to 0,749 kW** must have a minimum level **IE2** efficiency; the ones with power outputs ranging **from 0,75 to 74,9 kW** must have a minimum level of **IE3** efficiency. The single-phase **surface motors** with **power outputs ranging from 0,12 kW** must have a minimum level **IE2** efficiency.

The following tables also contain the mandatory information pursuant to Annex I, section 2, of the aforementioned Regulations.

## SHO SERIES MOTOR NOISE

The tables below show the mean sound pressure levels (Lp) measured at 1 meter distance in a free field according to EN ISO 11203. The noise values are measured on 50 Hz motors and have a tolerance of 3 dB (A) according to EN ISO 4871.

### SHOE 50 Hz 2-POLE

**OPERATING CHARACTERISTICS AT 50 Hz, 2 POLES**

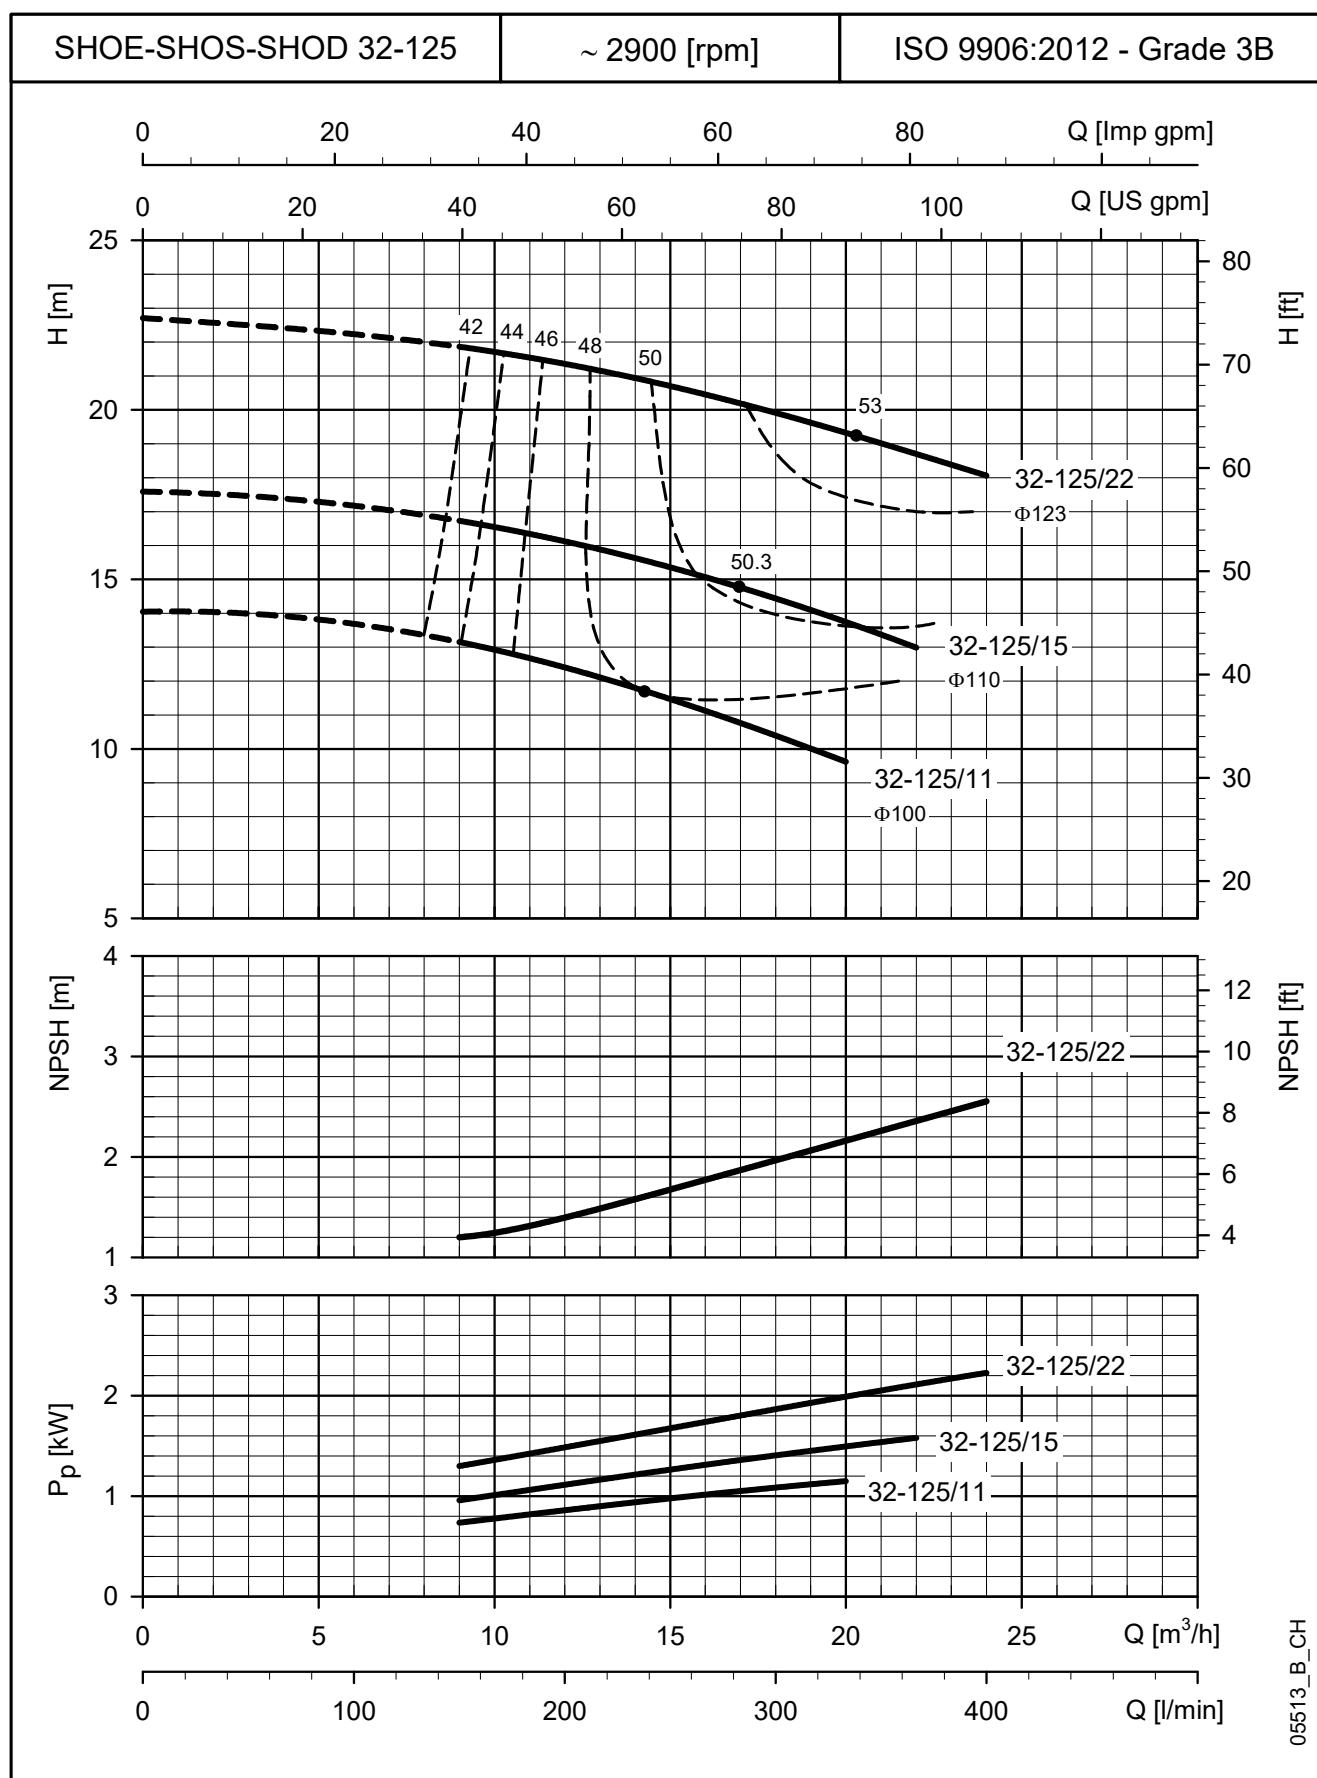

The NPSH values are laboratory values: for practical use we suggest increasing these values by 0,5 m.  
These performances are valid for liquids with density  $\rho = 1.0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

# TECHNICAL APPENDIX

## NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height  $h_z$  at which to install the machine under safe conditions, the following formula must be verified:

$$h_p + h_z \geq (NPSH_r + 0.5) + h_f + h_{pv} \quad ①$$

where:

- $h_p$**  is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid;  $h_p$  is the quotient between the barometric pressure and the specific weight of the liquid.
- $h_z$**  is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.;  $h_z$  is negative when the liquid level is lower than the pump axis.
- $h_f$**  is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.
- $h_{pv}$**  is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid.  $h_{pv}$  is the quotient between the  $P_v$  vapour pressure and the liquid's specific weight.
- 0,5** is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature ( $4^\circ C$ ) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

Water	temperature (°C)	20	40	60	80	90	110	120
<b>Suction</b>	<b>loss (m)</b>	0,2	0,7	2,0	5,0	7,4	15,4	21,5

Elevation above sea level (m)	500	1000	1500	2000	2500	3000	
<b>Suction</b>	<b>loss (m)</b>	0,55	1,1	1,65	2,2	2,75	3,3

Friction loss is shown in the tables of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port.

It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at  $\sim 15^\circ C$   $\gamma = 1 \text{ kg/dm}^3$

Flow rate required:  $25 \text{ m}^3/\text{h}$

Head for required delivery: 70 m.

Suction lift: 3,5 m.

The selection is an 33SV3G075T pump whose NPSH required value is, at  $25 \text{ m}^3/\text{h}$ , of 2 m.

For water at  $15^\circ C$

$$h_p = Pa / \gamma = 10,33 \text{ m}, h_{pv} = Pv / \gamma = 0,174 \text{ m (0,01701 bar)}$$

The Hf flow resistance in the suction line with foot valves is  $\sim 1,2$  m.

By substituting the parameters in formula ① with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2 + 0,5) + 1,2 + 0,17$$

from which we have:  $6,8 > 3,9$

The relation is therefore verified.

hr = flow resistance for 100 m of straight pipeline (m)

V = water speed (m/s)

G-at-pct-en\_b\_th

## **FLOW RESISTANCE**

### **TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES**

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	300
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate valve	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Foot check valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv-en\_b\_th

The table is valid for the Hazen Williams coefficient C=100 (cast iron pipework);

for steel pipework, multiply the values by 1,41;

for stainless steel, copper and coated cast iron pipework, multiply the values by 1,85;

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by manufacturers.

a xylem brand

## FURTHER PRODUCT SELECTION AND DOCUMENTATION

### Xylect

The screenshot shows a dark-themed software interface for 'Xylect PROFESSIONAL'. At the top right is the Xylem logo with the tagline 'Let's Solve Water'. Below the title, there is a sub-section labeled 'Selection tool for Xylem products'.

Xylect is pump solution selection software with an extensive online database of product information across the entire Lowara range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

The screenshot shows the 'Size a pump' search interface. It includes fields for 'MODEL OR NAME', 'NATURE OF SYSTEM', and 'NUMBER OF PUMPS'. To the right, there are sections for 'Duty point' (Total Design Flow, Total Head, Static Head) and a 'View results' button. On the right side of the interface, there are several links: 'SEARCH BY Product type' (with an image of a pump), 'SEARCH BY Applications' (with an image of water flowing), and 'Replacement guide' (with an image of a mechanical part). At the bottom, there are links for 'My projects' and 'Old product archive'.

*The search by application guides users not familiar with the product range to the right choice.*

# FURTHER PRODUCT SELECTION AND DOCUMENTATION

## Xylect

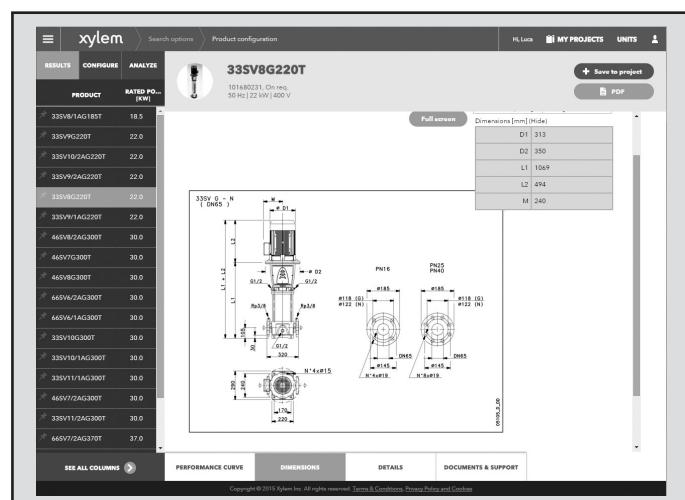

*The detailed output makes it easy to select the optimal pump from the given alternatives.*

The best way to work with Xylect is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect users

Every registered user has a proper space, where all projects are saved.

For more information about Xylect please contact our sales network or visit [www.xylect.com](http://www.xylect.com).

*Dimensional drawings appear on the screen and can be downloaded in dxf format.*

# Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
